Data Security Investigations

Investigate and mitigate incidents with AI

Incident timeline

Alert triggered	AI analysis	Scope identified	Root cause	Mitigation	Resolved
09:15	09:16	09:18	09:21	09:24	09:28

Signals & logs

- Identity logs
- Endpoint events
- Cloud audit logs
- Network traffic
- Email & phishing
- Data access logs

Total events 8,742

AI analysis & anomaly detection

AI anomaly score 92 High risk

- ✓ Unusual sign-in location
- ✓ Privilege escalation detected
- ✓ Access to sensitive data
- ✓ Lateral movement pattern
- ✓ Exfiltration attempt detected

Risk score & impact

92 High risk

Potential impact: High

Confidence: High

AI recommendations

- ✓ Isolate affected identities
- ✓ Revoke active sessions
- ✓ Contain endpoint
- ✓ Block malicious indicators
- ✓ Notify stakeholders

Apply mitigation

Data Security Posture Management (DSPM)

Discover. Classify. Protect. Monitor.

Data landscape

12.4 TB Sensitive data

PII	4.1 TB
Financial	2.7 TB
Health	1.8 TB
IP / Confidential	2.1 TB
Other	1.7 TB

Posture score 78 Good

Trend

1,245 Data sources | 3,876 Classified assets | 412 Exposure risks | 68 Policy violations

Copilot for Security

AI-powered security operations

Summarize the incident and recommend next steps.

The incident involves unauthorized access and data exfiltration attempts by a compromised account. AI analysis shows lateral movement and access to sensitive files.

Recommended actions:

1. Isolate affected identities
2. Revoke tokens and sessions
3. Contain affected endpoints
4. Review and confirm data access

Would you like me to run these actions?

Ask Copilot...

Detect with AI — Continuously monitor for risks and anomalies

Investigate with AI — Correlate signals, identify root cause, assess impact

Mitigate with AI — Take action, contain threats, reduce risk

Strengthen posture — Improve security posture and prevent future incidents

Outcome

Incident resolved

Risk reduced. Data protected. Security posture improved.

3 Types of Data Security Incidents

1. **Unintentional Data Mishandling**
2. **Cross-Signal Risk Detection**
3. **Malicious Insider Risk Investigations**

Project Delta 1234: Corporate Restructuring and Acquisition Report

A Comprehensive Analysis of Corporate Transformation, Talent Strategy, and Market Impact

Executive Summary

Project Delta 1234 represents a pivotal moment in the evolution of our organization. The initiative is designed to optimize operational efficiency, strengthen our market position, and drive sustainable growth through a comprehensive corporate restructuring, which includes substantial workforce realignment and the recruitment of new talent for critical roles. Central to this strategy is the planned acquisition of a key competitor, a move anticipated to reshape the competitive landscape and deliver considerable value to shareholders. This report outlines the objectives, processes, financial implications, and expected outcomes of the project, providing a detailed roadmap for stakeholders and investors.

Focusing on these objectives helps you monitor key areas of your data security posture to prevent risks to sensitive data. Review and complete remediation plans for each objective to improve your posture and protect sensitive data. Learn more

Data protection

Prevent data exposure in Microsoft 365 Copilot and Microsoft Copilot interactions

Copilot interactions with sensitive data

0 → +0% in last 29 days

0 Microsoft 365 Copilot and Microsoft Copilot interactions with sensitive data were detected from your organization in the last 30 days, a decrease of 0%. This could indicate emerging patterns of data exposure.

View remediation plan | View objective

Data protection

Prevent oversharing of sensitive data

Overshared items

19.6k +34% in last 30 days

19,577 items containing sensitive data from Microsoft 365 Copilot and Microsoft Copilot are unlabeled and contain sensitive data, in the last 30 days, an increase of 34%.This could indicate emerging patterns of oversharing sensitive data.

View remediation plan | View objective

Data snapshot

Use this snapshot to understand your organization's data exposure for newly accessed or modified data and older data.

Microsoft 365

Stale data 896 (>1 year)

30-day trends for data accessed or modified more than a year ago.

Labeled		Not labeled	
Exfiltrated		Exfiltrated	
+0% →	0	+0% →	0

Fresh data 87.5k (<1 year)

30-day trends for data accessed or modified in the last year.

Labeled		Not labeled	
Exfiltrated		Exfiltrated	
+0% →	0	+0% →	0

Posture trends

Review trends for your organization's data security posture. Identify changes to posture that show possible risks and the effectiveness of sensitive data protections for data in Microsoft 365 and non-Microsoft 365 sources.

Assess and prevent oversharing

1 Identify
Review assessment results for users accessing sensitive items. You can review the weekly results from the default assessment or create custom assessments to review specific data sources and users.

2 Protect
Limit Microsoft Copilot and agents access to sensitive data and apply label and retention policies to SharePoint sites and data.

3 Monitor
Conduct SharePoint site and access reviews to evaluate permissions and user access.

Item-level scanning setup complete — Edit connection

Default assessment

Assess oversharing of sensitive data for the top 100 SharePoint sites based on how many times the sites are accessed. Results are derived from data collected over the last 30 days.

Results

Total items	Sensitive data detected	Sharing links accessed by Anonymous/External
32.4K	19.7K	0

Last updated	Next update	Frequency
May 15, 2026	May 22, 2026	Weekly

- Renaming and staging files locally
- Sharing files within Microsoft 365 services

- **External:**
  - Uploading files to unspecified cloud storage services (potentially non-Microsoft)
  - Sending emails with sensitive attachments to gmail.com
  - Sharing SharePoint files with external parties

Evidence of Staging and Obfuscation

- Renaming files after download and before upload (May 17, 2026)
- Deleting files after upload to cloud storage (Feb 28 – Mar 6, 2026)

External Destinations Identified

- **Email provider:** gmail.com (May 19, 2026)
- **Cloud storage:** Unspecified external/non-Microsoft services (multiple instances)
- **External recipients:** Involved in SharePoint file sharing and email exfiltration

This narrative covers all observed data handling activities involving sensitive Project Delta information by maria@demoonevinn.net, clearly distinguishing between internal and external data movement, and highlighting specific external destinations where available. The timespan for these activities is Jan 19, 2026 to May 19, 2026, with a total of 7 distinct activity events detailed above.

Summarize the complete data movement chain involving Maria and Sensitive Project Delta information
19 May 2026 19:21 • Anders Olsson

Search results

the data movement chain and pinpoint Maria as both an internal and external distributor of confidential Delta information.
  - Sensitive Delta documents were transferred by Maria from internal systems to external email addresses, including personal accounts and third parties.
  - Such transfers define critical nodes for monitoring external dissemination of high-risk project information.
- Inbound Delivery of Delta Information to Maria via Email - Maria Andersson is identified as an email recipient of sensitive Project Delta 1234 information from kattentusse@yahoo.com. The message illustrates inbound data flow into Maria's account, adding another layer to the inter-organizational data chain.
  - Maria was the recipient of emails referencing Project Delta, showing information flow inbound to her corporate address.
  - These records supplement outbound data movement, together capturing Maria's multifaceted involvement.
- Distribution, Storage, and Fragmentation of Project Delta Data Across Microsoft 365 Services - Project Delta artifacts and communications were dispersed throughout Teams, SharePoint, OneDrive, Outlook, and related M365 tools, making complete chain tracking reliant on aggregating records across the ecosystem. Maria's involvement was manifested through accessing, editing, and requesting data across these channels.
  - Complete reconstruction of data flow requires analyzing records from all key Microsoft 365 platforms.
  - Maria's activities spanned editing, retrieval, and management functions within these fragmented data environments.
- Maria's Internal Requests and Data Retrieval Actions Concerning Project Delta - Maria initiated several requests—in Microsoft 365 Chat and internally—to fetch or summarize Project Delta information, indicating her active search for sensitive data. While these logs confirm her research activity, they do not document onward movement or secondary data transfers resulting from her queries.
  - Maria's proactive information requests establish her as a primary data actor in Delta-related workflows.
  - Actual movements of data post-retrieval remain unspecified in these records.
- Records Unrelated or Indirectly Related to Maria's Delta Data Movement - Some records reference Maria, Project Delta, or general Delta activity but do not contribute meaningful evidence of sensitive Project Delta information moving through Maria's actions. These either document other project activities, address naming ambiguities, or mention Delta in unrelated communication contexts.
  - No substantial chain of sensitive data movement involving Maria can be established in these documents.
  - Entries are included for completeness and to clarify the bounds of the evidence-based chain.

BEFORE DSPM CAN WORK ITS MAGIC...

LET'S MAKE SURE THE FOUNDATION IS SOLID!

DSPM PREREQUISITES & SETTINGS CHECKLIST

1. MICROSOFT PURVIEW SETUP

- Microsoft Purview account enabled
- Data sources onboarded
- Purview solutions activated
- Permissions configured

2. SENSITIVE DATA DISCOVERY

- Sensitivity labels in use
- Sensitive Information Types (SITs) configured
- Auto-labeling configured (recommended)
- Content explorer shows results

3. DATA CLASSIFICATION AT SCALE

- Trainable classifiers configured
- Adaptive scopes defined
- Regular classification runs enabled
- High-confidence results prioritized

4. ACTIVITY & TELEMETRY

- Unified Audit Log enabled
- Microsoft 365 activity flowing
- DLP policies in place and monitoring
- Defender for Endpoint integrated
- Cloud app connectors active

5. RISK & CONTEXT SIGNALS

- Insider Risk Management enabled
- User & entity behavior signals on
- Endpoint DLP & alerts connected
- Threat intelligence connected
- Identity & access context available

6. DATA SECURITY POSTURE MANAGEMENT

- DSPM solution enabled
- All prerequisite data sources connected
- Objectives & risk assessments enabled
- Policies & recommendations reviewed
- Dashboards & alerts configured

GET THESE RIGHT, AND DSPM WILL UNCOVER WHAT MATTERS MOST!

CLEAR DATA. STRONG SIGNALS. SMARTER DECISIONS.

DSPM MAGIC ACTIVATED

REMEMBER:

DATA QUALITY + COMPLETE TELEMETRY + GOOD GOVERNANCE = POWERFUL INSIGHTS WITH DSPM ♥

DETECTIVE'S NOTES

- ☑ PREPARE
- ☑ CONFIGURE
- ☑ CONNECT
- ☑ UNCOVER

A LITTLE SETUP TODAY, A LOT OF CLARITY TOMORROW! ☺

Analytics

Activate analytics
Enabling this will allow you to receive data insights. After enabling Analytics, it may take upto 7 days to start seeing analytics and recommendations for your tenant. After turning off Analytics, it may take upto 24 hours to stop seeing the analytics and recommendations on your overview page.

Enable email notifications for new Insights
Get instant alerts via email every time new analytics insights are available.

Intelligent detections

Define how the detection of risk activities are processed for insider risk alerts.

File activity detection

Alert volume

Microsoft Defender for Endpoint alert statuses

Insider risk policy templates that detect security violations use security alerts from Microsoft Defender for Endpoint to prioritize related activity. Depending on the user activity you want to investigate, you can choose to generate security violation alerts based on the investigation status of the related Microsoft Defender for Endpoint alert. Microsoft Purview
Investigate and summarize data security and compliance signals such as DLP alerts, insider risk and policy insights directly from Purview

Microsoft Security for AI
Use case: Investigate and govern how AI apps and agents interact with sensitive data using existing Purview controls (labels, DLP, audit).

Purview DSPM Agent Plugin
Use case:Get AI-assisted insights into data security posture, oversharing risks, and prioritized remediation actions across Purview.

Purview On-Demand Classification
Identify unlabelled or inactive data at rest to reduce the risk of sensitive content being surfaced by AI.
